The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include:

- "Statement of Water Diversion and Use"
- "Information Pertaining to Water Rights in California"
- "Water Rights for Stockpond Construction Prior to 1969"
- "Appropriation of Water in California"

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users. The filing of a statement (1) provides a record of water appropriate for future appropriators. (2) enables the State to notify such users if someone proposes a new appropriation use, (3) assists the State to determine if additional upstream from their diversion, and (3) assists the State to determine if additional water is available for future appropriators.

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus to obtain a permit and license from the State.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the source of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, or return flows from use of groundwater.

There are two principal types of surface water rights in California. They are riparian and appropriative rights.
